Product Description

- Improved Acoustic Quality - By deadening unwanted sound using absorption panels, you can make other sounds much clearer. This leads to improved intelligibility of speech in lecture rooms or performance venues. It can also help in retail and dining environments.
- Reduce Stress - Cutting out unwanted noise can help to reduce stress levels too. If people can clearly hear what's being said, they're less likely to become irritated and frustrated by their inability to understand what's going on.
- A Welcoming Environment - If you walk into an office or restaurant and are hit by a wall of noise, it can be off-putting to say the least. Cutting noise makes for a more welcoming and pleasant environment.
- Improved Productivity - In offices, a space without excess noise can make for greater productivity. It can be easier for staff to hear customers on the phone and make conference rooms places that can be used without worries about confidential information leaking out.
- Safe & Secure- In spaces where there's a lot of noisy equipment, such as workshops or even computer server rooms, cutting noise can enhance workplace safety too. It makes it easy for employees to communicate clearly and helps to eliminate distractions that can lead to accidents.

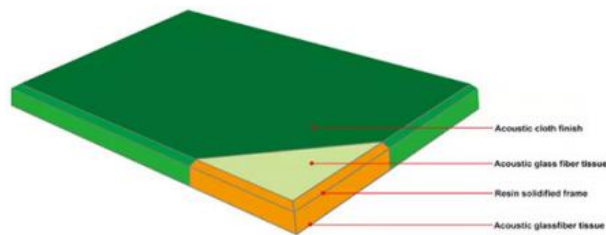

Fabric Wrapped Acoustic Panel

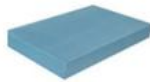

Specifications

- ① Basic Material: glass wool (default), polyester wool, melamine foam, etc.
- ② Front Finish: fabric, leather
- ③ Frames: resin frame, MDF frame, aluminium frame
