Product Description

Products Description

Wooden slat wall panels represent an optimal blend of polyester fiber acoustic panels with MDF wooden slats. We employ high-density polyester fiber acoustic panels as the foundation, which allows for customization of the wooden slat finish to meet your specific requirements. These wooden slat wall panels primarily focus on absorbing mid-frequency sound waves while still maintaining some absorption of higher frequencies. They exhibit excellent acoustic properties, effectively improving indoor reverberation times and significantly enhancing the clarity and fullness of clear speech in the environment.
